Summary risk indicator

Fund's risk level: Low to moderate

According to regulatory requirements (PRIIPs, Regulation (EU) No. 1286/2014) a new indicator is used when determining and presenting risk indicators of the funds managed by DSK Asset Management - "Summary risk indicator" (SRI - summary risk indicator, on a scale from 1-low to 7-high). It is determined on the basis of historical data from the fund's activity, and in the absence of sufficient history - on the basis of a suitable reference indicator or substitute, considering the market risk according to the fund's investment horizon, taking into account the credit risk, i.e. the credit quality of the instruments in which the fund invests. Additional information in the fund's Prospectus.

Investment strategy

The Fund strives to provide protection of the increase in the value of investments - the net asset value of a unit, calculated as of the last working day of the "limited period", should not be lower than 102% of its value, calculated as of the last working day from the "open period"), as well as (if possible) growth above the protected amount by providing exposure to indices on shares of European companies. The fund invests primarily in securities issued or guaranteed by the Bulgarian state, another member state or a third country, municipal bonds, corporate bonds and/or bank deposits in credit institutions with headquarters in Bulgaria, another member state or a third country, such as and in other liquid financial assets within the meaning of Art. 186 of ZDKISDPKI, incl. derivative instruments to provide exposure to an index/s on shares of European companies. The strategy envisages, through these instruments, that the Fund will participate in the possible increase in the value of the underlying asset on which the relevant derivative instruments were purchased, but at the same time be protected from a decrease in the value of the underlying asset (index).
